SUMMARY

Computer Science graduate with ~1 year of hands-on experience building backend services in Python. Comfortable designing REST APIs and shipping features in small teams. Looking to grow as a backend engineer in a product-focused company.

SKILLS

- Languages: Python, JavaScript, SQL (basic)
- Backend: FastAPI, Flask, REST API design
- Databases: PostgreSQL (basic queries), SQLite
- Tools: Git, GitHub, Postman, Linux
- Currently learning: Docker, AWS

EXPERIENCE

Backend Developer Intern – PayQuick (Fintech Startup)

Aug 2024 – Jul 2025 (1 year)

- Built and maintained 8+ REST API endpoints in FastAPI for a wallet feature used by ~5,000 users.
- Wrote PostgreSQL queries and integrated them into the service layer.
- Added unit tests with pytest, raising coverage on my modules from 20% to 65%.
- Collaborated with the frontend team using Git feature branches and pull requests.
- Fixed production bugs reported by support and reduced one endpoint's latency by 30%.

PROJECTS

ExpenseSplit – Python + FastAPI + PostgreSQL

- A bill-splitting REST API with JWT auth and group expense tracking.
- Deployed on Render; documented endpoints with Swagger.

EDUCATION

B.Tech, Computer Science – 2024

Relevant coursework: Databases, Operating Systems, Web Development

CERTIFICATIONS

- "REST APIs with FastAPI" (online course, 2024)
